Matter of inches costs Redwings another victory

ALMA's oh, so close extra point attempt by Drew Carpenter went wide right Friday night with Alma taking the victory 12-9 on a touchdown in the overtime.

The game was a matter of inches, not only on the runs, but also on the kicks. Carpenter was ruled wide and sent down. Mike Cowdrey scored the extra point and drove 66 yards for a touchdown. Barz also picked up 4 fumbles.

**THE GAME then went into overtime and St John's got the ball first. They were unable to put the officials ruled that it was knocked off Grand Ledge. It was the 2d game in a row that a matter of inches meant victory 12-9 on a touchdown in the overtime.

Alma led 6-0. The Redwings missed by inches a 4th down to put the Redwings into overtime. It was then that Carpenter kicked a 27-yard field goal on the 1st play and went 10 yards ahead 9-6.

St Johns tied the game in the 4th quarter when Pat Thelen tossed a 20-yard touchdown pass to Dan May. Walter picked up the next point conversion to give the Pirates a 21-0 halftime lead.

They scored again in the 2nd quarter and went 16 yards in the air for 230 total offensive yards. Randy Walter led the rushing with 73 yards in 24 carries. Wellman zipped into the end zone from the 17-yard line.

The Pirates scored twice in the 2nd quarter and had 1 touchdown. Barz, Jim Lynch, Jeff Hazle and Dick Parker. Barz also carried the ball 8 times for 36 yards and 1 touchdown. Wellman zipped into the end zone from the 17-yard line.

The Pirates scored again in the 2nd quarter and had 1 touchdown. Barz, Jim Lynch, Jeff Hazle and Dick Parker. Barz also carried the ball 8 times for 36 yards and 1 touchdown. Wellman zipped into the end zone from the 17-yard line.

Defensive backs Steve Simon capped a 56-yard drive with a 1-yard touchdown pass to Dan May, Walter picked up the next point conversion to give the Pirates a 21-0 halftime lead.

The Pirates scored again in the 2nd quarter and had 1 touchdown. Barz, Jim Lynch, Jeff Hazle and Dick Parker. Barz also carried the ball 8 times for 36 yards and 1 touchdown. Wellman zipped into the end zone from the 17-yard line.

The Pirates scored twice in the 2nd quarter and had 1 touchdown. Barz, Jim Lynch, Jeff Hazle and Dick Parker. Barz also carried the ball 8 times for 36 yards and 1 touchdown. Wellman zipped into the end zone from the 17-yard line.

Fowler edges Bellevue in double overtime 6-0

The game started with both teams displaying strong defensive play. Fowler scored first with a penalty shot in the first quarter, but Bellevue soon tied the game with a goal from John Smith. The teams went into halftime tied at 1-1.

In the second half, both teams continued to play defensively, keeping the score close. Fowler scored again in the third quarter, but Bellevue once again tied the game with a goal from Mark Johnson.

The game entered overtime with the score still tied at 2-2. Both teams continued to play defensively in the first overtime period, but it was Fowler who finally scored the winning goal in the second overtime period, courtesy of a goal from Mike Smith.

Final score: Fowler 6, Bellevue 2.

Ovid-Elise Area Schools
hold open houses

Teachers and administrators
met with many of the parents
in the Ovid-Elise School System
last week in several different
open-houses programs in
understanding of the school.

Activities began Monday
morning with a special program
describing various sections and
routes that children travel to the
three elementary schools.

The Ovid-Elise High School
opened its open-house on
Thursday and continued it on
Thursday afternoon. It consisted of
a coffee hour and visiting various
classes and departments,
followed by classroom
sessions for observation of the
classes of these three days. A Day
Care Center, the IS house
Riley school has
Halloween party

A Halloween Party was held
at Riley Elementary School
Wednesday night. It consisted
approximately of 60 children
who enjoyed a party
featuring games and refreshments.
Those who were purchased
from the Lansing Lumber
Company were awarded the
prizes that weighed the
heaviest.

Because of the success of the
Halloween Party, it is planned again for
next year.

BER . . . DALEY'S THIS NIGHT. See and hear Tom and Daley. November 8, 1973

It's over, there's no use fighting it.

Summer falls and whatever fads summer has been all good.

Don't pay any attention to the calendar, the cold, blast of winter are upon us and the snow will soon be luding the ground until next May.

For some winter is the joyful time of snowmobile riding, skiing, etc.

But, as far as the ice and snow of winter are concerned, some of us feel it's much like the man hitting himself over the head because he has a great headache.

"Winter," said one man, "is the time of our family, home with honor. He makes every day a Christmas for his friends.

"Yes, winter," said another, "when we can sit by the fire and read our favorite books."

4-H Chatter

Teen awareness team

By JOHN AYLSWORTH

Two Clinton County 4-H teams visited Teen Awareness Center near Tustin Oct. 25-27.

Teen members Bonnie Schafer, Kathy Valentine and Virginia Miller taught teens about communication skills.

The building was in the process of being a new facility for teenagers, including educational programs and a new television and radio station.

Schafer introduced her program, "Making a Good Poster," which was followed by the others: "How to make a good puppet," "Making puppets," and "Making a Good Slide Tape." Schafer also gave the group a tour of the center.

Three Clinton County 4-H Team members Bonnie Schafer, Kathy Valentine and Virginia Miller attended Teen Awareness Center near Tustin Oct. 25-27.

The judging contest consisted of beef, veal, lamb and pork contests. The judge was Jack Worthington, member of the Michigan Livestock Judging and Marketing Council.

Team member Tim Grau, Chelsea, placed fifth in the overall judging contest.

A former owner of the farm before the Civil War is now the present owner, Philip Spitzley.

The farm, located in Dallas Township, was purchased Dec 19, 1867 by Philip Spitzley. It has been in the possession of the family since 1867. It was originally purchased in 1867. It was originally purchased in 1867.

C. Bracy entered the meeting at 8:37 pm. It was moved by C. Bracy regarding the farm, "How to make a good poster," "Making puppets," and "Making a Good Slide Tape." Schafer also gave the group a tour of the center.

A birthday dinner was held on Thursday afternoon for Mrs Baby On and Mr and Mrs Charlie On in honor of Mrs Baby On’s thirty-six birthday. Mrs Baby On, Mr and Mrs Charlie On, Mr and Mrs John On, Mr and Mrs William On, and Mr and Mrs John On were among the guests. The dinner was held at 6:00 PM at the home of Mrs Baby On and Mr and Mrs Charlie On. The menu included roast beef, potatoes, and vegetables. The evening was filled with laughter and joy as the family and friends celebrated Mrs Baby On’s special day.

Imported and Domestic Cheeses

Buy them pre-packed or freshly sliced from either the Dairy or Manhattan-style Delicatessen.
Outwit Winter

Now's the time to make sure your car's up to the rough weather ahead. So you'll enjoy safe, trouble-free driving. And reduce harmful engine emissions. All winter long.

Clinton County News
Worn Windshield Wipers Can Endanger Driver

Like so many other crucial devices, your car’s windshield wipers are most likely to fail just when you need them most. During the winter months, windshield wipers have to fight snow, ice, slush, and road salt, as well as the usual rain.

And that is when clear vision is extra important, due to hazardous road conditions. So now is the time to check your wiper blades carefully, and to replace them if they’re not in perfect condition.

How should they be checked? And what are the signs that a wiper blade isn’t up to par?

The best time to check your blades is during a rainstorm, or just afterwards, when there’s dirty water on the roads. Or you can check them by using your windshield washer or as you go through a car-wash. Or even by having someone spray water on your windshield with a hose.

Whenever you choose to test your wipers, you should be sure to check them at all wiper-speed rates they can be set for. And also be sure to check for all of the following signs of malfunctioning:

- Streaking — arcs of unwiped moisture within the wiping area;
- Hazing — a thin, hard-to-see-through film covering most or all of the wiping area even after the blade has just wiped;
- Hopping — a jumpy motion, accompanied by a “chattering” noise as the blade sweeps across the windshield, with some areas left unwiped;
- Scalping — a ragged out-
er edge in the wiping pattern;
- Rattling — no visible signs of problems, but the wiper blade assembly sounds as if they’re very loose.

If any of these symptoms are present, you should replace as much of your wiper assemblies as is necessary to eliminate the problem. In many cases, all that’s needed is new squeegees (the rubber strips that actually wipe the windshield). Try replacing the squeegees first, and if this doesn’t solve the problem, replace the entire wiper-blade assemblies.

When you do replace all or part of your wiper blades, replace both at the same time; if one is “shot,” the other is usually about to give up, as well. And good vision is too important to risk for a few dollars.

One final tip. If you are replacing your wiper blades, consider the new, molded polycarbonate variety. They just longer than the old metal type, and cut down on glare and rattle, as well.

Let Dick Hallead Put You In A New 1974 Ford . . . Just in time for that family Thanksgiving trip!

Remember last winter? Now’s the time to bring your car to us!
HINTS FOR TRANSMISSION MAINTENANCE

Avoid quick shifts; give your gears a chance to shift smoothly. A smooth take-off is easier on the engine, too.

If your car has a manual transmission, avoid riding the clutch. When you foot rests on the clutch pedal, often the clutch begins to engage improperly. This additional friction is built up between clutch pressure plate and lining, causing both to wear out prematurely.

Periodically, check transmission fluid level and differential fluid level. Change the transmission fluid at recommended intervals even if fluid becomes contaminated. (Ordinarily, have all parts cleaned at this time.)

Replace transmission fluid screens when fluid is changed or otherwise required. Check and/or change transmission module if your car is so equipped. Add new bands if your transmission requires it. Also, ignore this instruction if the manufacturer recommends otherwise.

YOU NOTICE... THIS MAY MEAN... CAUSED BY... YOU SHOULD...

a chattering sound when your car first begins to move with a manual transmission.
the clutch is not engaging properly
all on the clutch, or you may have worn parts
have a qualified mechanic check out the problem

same as above with an automatic transmission
the clutch is not engaging properly
a worn clutch or bands
have a qualified mechanic check out the problem

your car doesn't respond to engine speedups
your clutch is slipping
a worn clutch or one out of adjustment
have a qualified mechanic check out the problem

NOTE: There are a number of other transmission problems too complicated for discussion here. If your transmission does things or makes noises that seem strange, don't ignore these symptoms of malfunction. You'll find it more convenient and more economical to correct transmission problems as early as possible.

The transmission system of the average car is something motorists take for granted. While transmission usually will run efficiently for many miles with a minimum of maintenance, there are still critical adjustments and services that must be performed. The Fram Corporation offers some tips on transmission care in a new booklet it has prepared for the car owner. For information on receiving it, write Fram Corporation, Providence, R.I. 02916.
Today's cars are more complicated than ever, but there are still some under-the-hood things you can do for yourself. Some, like checking your battery, radiator, and oil level, are things you probably already do. But you may not have realized that you can also check your own belts and hoses in a jiffy, without special tools or training.

BELTS
Most belts look fine on the top, even when they're in terrible condition. So, when you're checking your car's V-belts, be sure you look at the sides and bottoms. Here's what to look for:

- Cracks on the underside are rapidly made larger by flexing. Belt can break without warning.
- Glazing — slick hard sides cause low battery and overheating.
- Grease-softened undercore and slick sides cause slipping — also rot rubber.
- Peeling — Undercore peels or frays at bottom corners so that belt runs rough — soon fails.
- Split belt — Top of belt may look good, but undercore may be split or sides badly worn.

And while you're checking the condition of your V-belts, you should also check to be sure that they're properly tensioned. A loose and slipping belt slows fan, pump and generator — causes poor cooling, overheating, battery failure. It is difficult to over tension a belt with ordinary tools.

Check belt tension and tighten as necessary. As a rule of thumb, tension is proper when belts can be pushed down about 1/4" at midpoint between pulleys.

HOSES
Many hose defects can be spotted just by looking, but it's always a good idea to check each hose for softening or hardening, by squeezing. Rubber hoses should be firm, but not brittle.

Things to check for are the following:

- Cracks and breaks cause leaks that can't be stopped by tightening clamp. Squeeze it. If cracks go to cords, replace hose.
- Hardened hose is stiff — transmits shock to radiator — fails without warning. You can't seal by tightening clamps.
- Swelling — Spongy ends or swelling indicate hose has been ruined by oil or grease.
- Hidden failure — Hose may look good, but it may be deteriorated inside, clogging radiator with particles. Squeeze it, and replace if soft.
- Worn clamps — When checking hose, replace clamps that can't be tightened. If you replace hose, always replace clamps.

More Tire Mileage
Let your wife do the driving.

According to Goodyear Tire and Rubber Company, women average 30,000 miles on tires while men average only 20,000, with some men getting as little as 12,000 miles.

Of course the area of the country, road conditions and driving speeds influence tire wear.

More wives don't travel 70 mph to the grocery store so maybe this explains Goodyear's findings.
Saving Two Gallons Per Car Is Goal

"If everyone in this country used one less gallon of gasoline a week, there wouldn't be a shortage."

That dramatic statement was contained in a newspaper advertisement run by one of the nation's leading oil companies. It seems like an enormous task to cut down on gasoline consumption by more than 260 million gallons a week or 13 billion gallons a year, but when the problem is examined on an individual vehicle-by-vehicle basis, the task is not as overwhelming as it first appears.

Consider this. There is about one motor vehicle in this country for every two persons. Thus, if every vehicle would use two fewer gallons of gasoline a week, there would be no shortage.

**Tune-Up is Key**

According to Champion Spark Plug Company, saving this amount of fuel can be achieved, even without reducing the amount of driving done.

The major part of that savings can be achieved by making sure the car's engine is in tune. Tests conducted by Champion in the United States, Canada and Mexico showed what a fuel waster an untuned engine can be.

Cars were tested with an engine overdue for tune-up (More than 10,000 miles traveled since the last tune-up.) Next cars were checked with new spark plugs installed and then with a complete tune-up.

New Plugs Help

With new plugs alone, there was an average fuel savings of 6.2 per cent. Once a complete tune-up was performed, average savings was 8.2 per cent.

Thus between one and two gallons of gasoline per barrel can be saved by a tuned engine. So, if you use a bank of gas a week, you've almost done your part to help alleviate the fuel shortage.

In addition, a tuned engine starts more easily and considerable fuel is wasted in hard-starting situations.

**Other Assets**

There are a variety of ways to help make up the rest of the gallonage to bring weekly savings to over two gallons a week:

- Make sure your tires are properly inflated. Underinflated tires are gas wasters.
- Accelerate smoothly. "Hot rod" type starts consume enormous amounts of fuel.
- "Play" the traffic lights and avoid stop and start driving as much as possible. If you have to spend long periods of time idling, it's better to shut off the engine.
- Watch your speed. You use over 25 per cent more fuel traveling at 70 miles per hour than you do at 50.

Get Your Auto to Last Longer

Keep it from Junk Heap Prematurely by Taking Care of Key Systems

With new car sales hovering around all-time record volumes this year, the pundits and prophets have offered a wide variety of reasons for the boom. Among the reasons most often cited was this: Cars in the near future may be higher in price due to emissions and safety systems mandated by the government.

Still it seems that many 1973 and 1974-model car buyers want to take advantage of lowest possible prices now and presumably want to keep these cars as long as they can. Certainly, new cars will continue to be attractive buys for millions of motorists annually. The thrill of new car ownership is a never-ending one.

Lamentable History of Neglect

While the theory is sound, the motoring public will have to do a lot better job than they have been doing if they want their new cars to last. For the lamentable history of car neglect that has been so evident in this country has always meant that vehicles are ready for the scrap heap well before their time.

There are more motor vehicles jammed in this nation every year than there are vehicles registered in all of South America. Only five nations in the world have more cars than the number of cars relegated to scrap heaps here each year.

And a large proportion of our landlubberly population got that way because of neglect.

If you want to get your car that extra couple of years, you must pay more attention to car care.

The benefits of car care outweigh the costs considerably.

For example, the nationally-syndicated columnist Sylvia Porter recently noted, "Tune-ups pay for themselves in savings on fuel consumption and engine wear. And as gas prices climb, a tune-up will more than pay for itself."

Other instances of how caring for a car lengthens its lifespan and saves money in the meantime are many.

- Changing oil and oil filters and lubrication at recommended intervals helps prevent premature engine and chassis wear.
- Balancing and aligning tires and aligning wheels add 25 per cent or more to the life of a set of tires.
- This does not even take into consideration the servicing of safety components that help prevent accidents. Certainly, keeping brakes, lights, tires, windshield wipers in good operating condition are keys to safe driving. Maintaining the cooling system is another must for trouble-free driving.
- Also, many cars are premature junkyard candidates because of body neglect. So, keeping a car clean, free of rust spots and dents can add years and value to your car.

Winter Especially Hard on Cars

In this fall and winter season approaching, the elements are particularly hard on a car. In colder climates, the igniting and cooling systems especially take a severe beating.

So, to make sure your car gets through the season in good shape and to add those extra years of life to your vehicle, bring it in to your favorite service outlet for a tune-up.

Winter Especially Hard on Cars

Radiator Care Helps Cool It this Season

If you're like most motorists, you probably have your car tuned up once or twice a year, to prevent trouble and assure that you're getting the most your car has to offer in the way of performance and fuel economy.

Those tune-ups you've been getting are fine for your car's ignition and fuel systems. But they do nothing for the cooling system.

Unless your engine is kept at just the right temperature, it will perform poorly, waste fuel, and possibly even burn itself out long before its normal life expectancy.

The heart of your car's cooling system is the radiator, which contains the coolant that is pumped through passages in the engine block, to keep the engine from overheating. The coolant absorbs the heat from the engine, and then is pumped back through the radiator, where it is cooled off by the fan.

So in order for your car's cooling system to do its job properly, the radiator, water pump, thermostat and fan must all be operating efficiently — which means that the belts and hoses which connect these key components must also be in tip-top shape.

This means that just as you have the ignition and fuel system tuned up periodically, you need to have your cooling system checked out and tuned up, too. The Gates Rubber Company calls this a "Tune-Up Number Two." And shows you the accompanying checklist for automotive service technicians to use in performing this second check-out and tune it up with you next time you're planning to have your car serviced.

Remember Washers

When putting anti-freeze into your radiator, fill the sight glass of the windshield washer fluid.

Newer Cars
Running 50% Cleaner

Engine Maintenance is Revealed
By Study as Critical Factor
In Lowering Emissions

Laboratory and test track probes give indisputable
proof that the cars of today are built to emit signifi­
cantly fewer carbon monoxide (CO) and hydrocarbon
(HC) than cars of the 1960s. But what about per­formance
of vehicles actually in use? Newer models are
running about twice as clean as models built prior to 1968.

The survey, conducted by Champion Spark Plug Com­pany, showed the following results:

<table>
<thead>
<tr>
<th>MODEL YEAR</th>
<th>AVERAGE CO EMISSIONS</th>
<th>AVERAGE HC EMISSIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-1968</td>
<td>4.7 per cent</td>
<td>273 ppm</td>
</tr>
<tr>
<td>1968</td>
<td>3.8 per cent</td>
<td>450 ppm</td>
</tr>
<tr>
<td>1970 and newer</td>
<td>3.9 per cent</td>
<td>305 ppm</td>
</tr>
</tbody>
</table>

Reason for the cleaner-running car, according to Cham­pion, is the anti-pollution systems designed and installed
by various car manufacturers. Due to these new devices,
prospects for rapid improvements in performance according to the Motor Vehicle Manufacturer's Association, 17 out of
20 cars now on the road have some form of emission
control.

Forty-three per cent have crankcase controls only, 33
per cent have crankcase and exhaust controls and 22 per
cent have crankcase, exhaust and fuel vaporization
controls. As the older, non-controlled or not-fully controlled cars
are scrapped, cars in operation will be emitting only a
fraction of present-day levels.

The survey also revealed that engine maintenance con­tinues to be vital to keeping emissions low.

In the Phoenix tests, there was an average reduction
of 56 per cent in CO and 40 per cent in HC at idle after
tune-up. Smoke reductions in harmful emissions were noted
in Denver tests as well.

Quality Sign

SHOWS THEY KNOW — If you're looking for proven competence of an auto mechanic, this orange and blue shoulder patch on his uniform is one sure-fire indication. The patch and the specialty emblems shown in tones are awarded to auto service personnel who can pass a thorough examination on one or more car systems skills. More than 30,000 mechanics have taken the test, administered by the National Institute for Automotive Service Excellence, an independent, non-profit organization. Facilities having certified mechanics also will have a display card on the premises.

Low Mileage Cars Require Attention

Owners of low-mileage cars — those driven on the average of 7,000 miles or less annually — may believe their cars stay in "mint" condition because of the low mileage. In fact, unless the owner takes extra care of these vehicles, their "prized" possessions may be turning into prime headaches.

The low-mileage car owner may believe he should get recommended service at normally suggested mileage intervals. But, maintenance schedules are planned for automobiles driven the average of 10,000 or 12,000 miles per year.

The engine, especially, suffers as a result of short-distance driving — often, because it does not have time to warm up properly. Vital lubrication of the engine's moving parts is restricted.

It is this proper lubrication that minimizes wear within the engine. With normal usage, dust and the wear particles are carried to the drip pan by the oil.

But an engine must be allowed to run after it has warmed up — in order for the (warm) oil to flow freely, and carry away all or most of the damaging particles.

Put Car on ‘I-C-E,’ Canadian Council Advises

Experts List Three Major Factors Affecting Auto Performance When Temperature Drops

- If you've put off having your car serviced for cold weather, let the word 'ICE' serve as a reminder. I, C and E are the initials for the Ignition, Cooling and Electrical systems — three major factors affecting your car's dependability when temperatures drop.

According to Car Care Council of Canada, these are the points that should get attention:

- **IGNITION SYSTEM** — You may be well advised to invest in a tune-up if you're nearing the 10,000 mile mark since the last time that work was done. This usually involves replacement of distributor points, condenser, and rotor plus spark plugs (and sometimes wiring). The service includes adjustment of ignition timing, idle speed and automatic choke. Your mechanic also will check on the condition of the various filters and pollution control devices so essential to efficient engine operation.

- **COOLING SYSTEM** — There's more to cooling system maintenance than flushing the radiator and replacing the anti-freeze. The system should be pressure tested for potential leaks. Hoses and belts should be examined and replaced as necessary.

- **ELECTRICAL SYSTEM** — That sickening "click-click" that signifies a dead battery may be nothing more than a corroded connection creating an abnormal resistance in your starting circuit. Or it could be a problem in your car's alternator or voltage regulator.

Then again, it could be the battery itself. A battery's average life is from 28 to 36 months. To play it safe, have your car's charging circuit, battery and connections checked while you are in command of the situation.

Ask your mechanic for a safety check, too, including tires, exhaust system, lights, brakes, windshield wipers and washers, shock absorbers and steering mechanism.

Slippery Driving Hazards Come From Wet Leaves, Patchy Ice

Autumn and winter driving can hold numerous hidden hazards. Wet leaves on the road surface or patches of ice on bridges or shady pavement can be far more dangerous than driving on newly fallen snow.

If you run into stretches of slick pavement, reduce speed but don't slam on the brakes. If you brake too hard, you're likely to lose traction and start sliding. Also, avoid any abrupt steering movements.

If your car should go into a slide, don't panic — turn the steering wheel in the direction the car is sliding, and allow the car to reduce speed by taking your foot off the accelerator. If you must use the brake, pump it lightly.

If you have stopped on a slippery surface, accelerate slowly. In this situation as well, sudden movements can cause your car to go out of control.

In cold, rainy weather bridges freeze sooner than the rest of the road surface. Be especially careful to avoid skids on bridges.

Car in Condition?

Compulsory car checks are turning up interesting facts about the cars we drive.

- Headlights are out of adjustment on 38% of all cars.
- 48% have improper tire pressure.
- 28% have contaminated transmission fluid.
- 49% have some form of ignition system breakdown.
- 28% have carburetor malfunctions and 36% have incorrect timing.

These are the areas your service outlet should look at the next time you put your car in for a check. In at least three of these areas, the fix is fast, simple and costs very little.
What You Can Do While...  
Waiting for the Tow Truck to Come

Waiting for a tow truck to help your car get started in winter is not one of life's most enchanting pastimes. Chances are, you're late for work, an important appointment or anything preferable to waiting for the wrecker. It's too cold to practice your putting on the front lawn and you don't dare risk a short nap for fear that the road service driver may come and go before you can spot him.

So, what do you do? Here's a suggestion that can both help occupy your time and prove helpful in preventing future starting problems. Pay attention to the signals your car is giving you while you are attempting to start it. Analyze the sounds and the odors and try and figure out just what the problem is.

No, it's not as simple as "my battery is run down." Your battery-may be run down, all right, but most likely any battery problem is caused by malfunction of some other component.

It while attempting to start the engine, you hear the starter cranking but nothing happens, suspect one or more of the following conditions, Champion Spark Plug Company suggests. (The strong odor of gasoline may be present, too.)

- Worn spark plugs
- Cracked distributor cap
- Worn rotor

More than half of the 60 plus million road service calls made annually by tow trucks are for starting trouble. Hard-starting remains the No. 1 problem faced by motorists. Yet, according to...

Checklist—Tune-Up

Number 2

1. Visually check coolant level for indication of leaks or excessive oil content.
2. Check with pressure tester for internal and external leaks.
3. Visually check oil for water content.
4. Test thermostat for proper opening and closing.
5. Check heater valves.
6. Check heat gauge for accuracy.
7. Drain and flush cooling system.
8. Clean radiator core, hose and check for clogging.
9. Clean engine heavily covered with grease and oil.
10. Test radiator pressure cap.
11. Check radiator neck cap seat for nicks or scratches that could release pressure.
12. Check water pump bearings.
13. Check fan blades and pulley for alignment and balance.
15. Check core plugs and drain cocks for leaks.
16. Rebuild system with coolant and check for leaks.
17. Recheck entire system for leaks.
18. Check and adjust tension of V-belts.
19. Check and reset ignition timing to eliminate plug.
20. In cases where cooling system continues to overheat, check other possible causes.
21. Replace belts, hose, clamps, thermostat and cap as necessary.

Anytime You Need Your Car Washed Just Drive On Out To Randolph's Speedy Car Wash

The Self-Service Bays are open 24 hours at just 25¢. The Full Brush Speedy Car Wash is open from 9 to 9 seven days. It washes top, sides, bottom, front, and back. The Full Brush Bay has Five Processes: (1) Pre-Wash, so the dirt doesn't scratch your car while going through the brushes (2) Washes (3) Rinses (4) Waxes (5) Dries, with the big blowers. All in just 2 minutes.

Whenever you feel like washing your car, day or night, just stop at Randolph's. That'll do the job!

Get Your Winter ‘Whoa’ Power Ready—Have Brakes Checked

Dependable brakes on a car are a year-round necessity—but, in many areas, winter brings more frequent split-second demands on the brakes.

Like other automotive parts, brakes can be affected by temperature changes. Pre-winter inspection may reveal a need for brake adjustment.

A thorough brake and wheel inspection may also reveal that wheels are out of alignment, which causes excessive tire wear.

Brakes, as well as wheels, may be out of balance after long trips on hot pavement and bumpy side roads during the summer. If your car pulls to the right or left when stopped from a slow speed—less than 10 miles per hour—the brakes are out of balance and your car is unsafe. On wet pavement, unbalanced brakes can cause a car to skid.

Brake balancing* and a good alignment job provides the motorist with extra protection for winter driving, because the car will respond better in unfavorable driving conditions.

Brake systems should be inspected every 10,000 miles, if dependable stopping efficiency is to be maintained. If frequent braking and fast stops are required in your driving, earlier inspections are a wise practice.

Many otherwise cautious drivers will “delay brake service until brakes signal their distress with grinding, squealing or slapping noises. At this point, drums or discs probably are scored too deeply for resurfacing—and new ones will have to be installed, which increases repair cost.

If adjustments are not needed, you’re money ahead—if they are, the repair cost will be small, compared to the loss that could be suffered due to brake failure.

Motorists can protect their cars from the serious brake malfunctions that cause accidents and major expense—with regular brake inspections, simple adjustments and repairs.

Take a look at these brake shoes from a car that... seemed to be stopping okay... just pulling a little bit to one side.

Brake linings worn to this extreme are not only a safety hazard, they also damage the brake drums. The result: a higher than normal repair bill. Note, too, that the wear on the left side is much greater than on the right, a good case in point for having all four brakes checked.

If you have not already taken your car in for its winter brake checkup, the time to do it is now.

Many otherwise cautious drivers will delay brake service until brakes signal their distress with grinding, squealing or slapping noises. At this point, drums or discs probably are scored too deeply for resurfacing—and new ones will have to be installed, which increases repair cost.

If adjustments are not needed, you’re money ahead—if they are, the repair cost will be small, compared to the loss that could be suffered due to brake failure.

Get Your Winter ‘Whoa’ Power Ready—Have Brakes Checked

Lengthy Stretch Shortens Trip

Tests conducted in the U.S. have come out with some facts on how a motorist’s ability to drive is impaired by long stretches behind the wheel. On the average, after four hours of driving, a motorist takes 20 per cent longer between corrections of the steering wheel.

The automobile with a fatigued driver drifts more than twice as far from the center of the lane.

If there is a blow-out before the driver regains control, the car will swerve three times as far as when he is fresh and alert.

Tests were made in a Cornell Aeronautical Laboratory (CAL) Inc. simulator in Buffalo, and are being followed up by over-the-road driving in actual vehicles. Both sets of tests are for the U.S. Department of Transportation.

The simulator puts the “driver” into conditions he’d actually find on the road with these conditions being controlled and set up by a computer. He “drives” by means of a steering wheel and accelerator and brake pedals.

The value of rest pauses in long distance driving also accrued some support from the tests, says CAL’s magazine, Research Trends.

There’s nothing finer than to be able to drive on the roads in this fine country of ours... BUT... WHEN YOU DO make sure your car is in top condition while you’re doing it. Take your car to your local service station and have it made WINTER READY. A thorough check of your car’s battery, brakes, tires, lights, etc., could save your life and others as well. Call for an appointment and have your car serviced for winter driving TODAY!
Car Air Conditioners Need Winter Action

In the wintertime, when a car's heater is in daily use, many motorists neglect to safeguard the cooling capabilities of their air conditioners. Even though the owner has paid $250 to $400 or more for an auto air conditioning unit, he cannot take its trouble-free operation for granted.

According to automotive manufacturers, the air conditioner should be turned on and allowed to run for at least five minutes each week in cold weather, or during periods when it is not in frequent use. These workouts allow the fluids to freely circulate and flush the system, thereby reducing hose clogging. A weekly circulation of the air conditioner fluid also lubricates the seals and other fittings vital to its efficient operation.

The fluid — or refrigerant — might be likened to the blood of the air conditioning system. If circulation of the fluid is interrupted or if it becomes contaminated with air or water, the air conditioner will not cool sufficiently — or it may fail completely.

Based on the average of 10,000 miles of driving per year, your car's air conditioning system should be checked and serviced once a year — or every 10,000 miles.

Weight on Tires

If you are not using a trailer, camper or motor home本次检查轮胎重量，请确认轮胎上是否有标记说明轮胎的重量。

If you are using a trailer, camper or motor home be sure to check the tire weight on the trailer, camper or motor home weight.

Surveys show that about 20% of all recreation vehicles are exceeding the maximum loads their tires are designed to carry. •

The five-minute weekly workout during cold spells or periods of infrequent use, plus the annual inspection and preventive maintenance as suggested here, are normally all that's needed to keep an air conditioning system in good working order year after year.

The cost of an annual inspection and tune-up won't break your budget — but major repairs or full replacement resulting from improper attention could.

Its value and many benefits notwithstanding, the auto air conditioner probably needs less attention than any other automotive system. But the attention it does require is important to its continued efficiency and to the owner's pocketbook.

Check the tension and condition of your fan and generator belts. These are critical to proper cooling and battery charging. Check with your service station about the multi-grade oil suitable for winter use.

Remember Snow Tires

Get your snow tires put on early and avoid the long wait during the first snow fall.

Park your car in a garage, if possible, to keep the engine from getting cold. Drive on the "top half" of the tank. This prevents water condensation from forming in your tank which can freeze and plug your fuel lines. In other words, don't wait until the tank is almost empty to fill it up.

Warm-Up Vital

Be sure to give your car a moment or two to warm up properly, but don't let it idle for long periods of time.

THE NEW TUNE-UP — The days when tune-up and other critical automotive services could be performed with tools that fit comfortably in the technician's back pocket are falling into history. Today, with demands of keeping emissions low and performance up to rigidly prescribed standards, the automotive service industry is utilizing space-age tools for accurate diagnosis. A chassis dynamometer under the car's rear wheels can simulate any condition a car is apt to encounter on the road. An electronic engine analyzer (upper left) can monitor everything that's going on under the hood including emission of hydrocarbons and carbon monoxide. A visit to a well-equipped shop and any needed adjustments will ensure any driver that his car is ready for the tough fall and winter driving ahead. (Photo: Courtesy of Clayton Manufacturing Company)
Power Steering Maintenance Is Simpler than You Think

If your car has power steering, you may be under the impression that this device is extremely complex, and can be serviced only by a highly trained specialist using special tools.

Actually, this is not the case. A power steering system is considerably more complicated than a non-power system. But most power steering maintenance work can be done by the average automotive service technician.

At the heart of your car's power steering system is the hydraulic pump that supplies the pressure to turn your car's wheels when you turn the steering wheel. This pump rarely breaks down, however, provided you make sure its supply of hydraulic fluid does not get too low.

So the most important thing to do to keep your car's power steering system in good working order is to have the fluid level checked periodically. And when you have the fluid checked, you should also have the system checked by a professional technician to make sure there are no leaks or other problems.

Low Mileage Cars Require Very Special Attention

Owners of low-mileage cars — those driven on the average of 3,000 miles or less annually — may believe their cars stay in “mini” condition because of the low mileage. In fact, unless the owner takes extra care of these vehicles, their “prized” possessions may be turning into price headaches.

The low-mileage car owner may believe he should get recommended service at normally suggested mileage intervals. But, maintenance schedules are planned for automobiles driven the average of 10,000 or 12,000 miles per year.

The engine, especially, suffers as a result of short-distance driving often, because it does not have time to warm up properly. Vital lubrication of the engine’s moving parts is restricted.

It is this proper lubrication that minimizes wear within the engine. With normal usage, dust and the wear particles are carried to the drip pan by the oil. But an engine must be kept at a sUde, don’t panic — moving movements.

Slippery Driving Hazards Come From Wet Leaves, Patchy Ice

Autumn and winter driving can hold numerous dangers. Wet leaves on the road surface or patches of ice on bridges or shady pavement can be far more dangerous than driving on newly fallen snow.

If you run into icy stretch-es or slick pavement, reduce speed but don’t slam-on the brakes. If you brake too hard, you’re likely to lose traction and start sliding. Also, avoid any abrupt steer- ing movements.

If your car should go in to a slide, don’t panic — turn the steering wheel in the direction the car is sliding and allow the car to re-cover. Sudden movements can cause your car to go out of control.

Put your cooling system in shape for Winter.

Unless the cooling system is in good condition, your car’s performance will suffer. You may experience poor fuel economy, breakdowns—even a shortened life for your car.

To prevent these problems, get Tune-Up No. 2—a complete check-up of your car’s cooling system. And if key parts need replacement, specify Gates, the top quality line of V-belts, radiator hoses, thermostat caps and thermostats. They’re available everywhere.
