County fights tax factor

Executive Vice President Gary Berger and executive secretary Doreen Wilkins review the latest tax factor analysis. The county has been using Tamarack's tax software to analyze tax factors. The analysis is based on a computer model that takes into account various factors such as property values, tax rates, and economic conditions. The results are then used to adjust property tax assessments.

Holiday traffic heavy, but safe in Clinton

County Clerk studies traffic reports and provides an overview of the holiday weekend. The traffic was heavy, but the county police department kept the roads safe. There were no major incidents reported.

CNBT sign lights up Derby

The CNBT sign in St. Johns is now lit up. The sign was installed in mid-June and is adding a new dimension to the Derby. The sign is a great addition to the event and is a symbol of the county's support for the derby.

ST JOHNS — The annual Soap Box Derby was held in St. Johns on June 5th. The event was a great success, with over 200 children participating. The derby was sponsored by the St. Johns Jaycees and was a fun-filled day for all.

The sign was installed in mid-June and is a new feature of the event. It is a great addition to the Derby and is a symbol of the county's support for the event.

ST JOHNS, MICHIGAN 48879

COUNCILMEN ACT ON SEVERAL ITEMS

Quiet meeting for DeWitt Council

DeWitt — The councilmen met and no one was present. On motion by Mayor Pro-tem Gary, the meeting was adjourned.

At that meeting, the Lake County Area Economic Development Agency met with the councilmen. The meeting was to discuss matters of interest to the community. The meeting was adjourned.

DeWitt VFW Post and Auxiliary install officers

The DeWitt VFW Post and Auxiliary held its annual election and installation of officers on Tuesday, May 20th. The following officers were installed: President, Mildred Rice; Sr. Vice President, Wilma DeFreese, installed 1975-76; Jr. Vice President, Wanda Mullins; Trustee-2 year, Wanda Mullins; Trustee-1 year, Frances Oberst; Trustee-2 year, Bernard Tice; Trustee-3 year, Jean Belbeck; Secretary/Treasurer, Robert Hatch; Sr. Vice President, Installed 1975-76; Jr. Vice President, John Maore, installed 1975-76.

Hold services Thursday for Sylvia Stankula

DEWITT — Funeral services were held Thursday, May 12, for Sylvia Stankula of DeWitt, who died May 9.

Sylvia Stankula was a member of the DeWitt VFW Post and Auxiliary. She was a member of the Auxiliary for 40 years and of the VFW Post for 20 years.

Mrs. Stankula was born in Iowa and raised in Michigan. She was married to John Stankula in 1945 and they lived in DeWitt for 60 years.

Mrs. Stankula was a member of the DeWitt Presbyterian Church and was active in the community. She was a member of the local chapter of the Red Cross and the American Cancer Society.

She is survived by her husband, John; two daughters; and two grandchildren.

VFW to host two-day reunion

The DeWitt VFW Post will host a two-day reunion on June 10-11, which will feature a variety of events, including a banquet, a dance, and a BBQ. The reunion will be held at the DeWitt VFW Post, located at 204 W. High St.

The reunion will feature a variety of activities, including a banquet on June 10, followed by a dance on June 11. The reunion will also feature a BBQ on June 11.

The reunion is open to all members of the DeWitt VFW Post and Auxiliary, as well as their families and friends. For more information, contact the DeWitt VFW Post at 517-482-4567.

You've always thought you were a Good Neighbor. Now prove it.

(Join Us)

There are a few places in the world where every dollar you spend on something new comes from another person. Not in DeWitt! In DeWitt, every dollar you spend on something new comes from another person. It's true. We're the only community that has a Good Neighbor Program. It's simple. You spend money on something new, and we'll give you a rebate. It's a good deal, and it's good for everyone.

Advertise livestock farmers to hedge

FARMINGTON — The two major livestock farmers in the area, Jim and Mary Smith, are hedging their bets. They have decided to hedge their futures and have purchased options to protect against the risk of commodity fluctuations.

Jim Smith, a local dairy farmer, said he began hedging when he realized that the price of commodities, such as corn and soybeans, could fluctuate drastically. He said he purchased options to protect against the risk of a decrease in the price of commodities.

Mary Smith, a local hog farmer, said she began hedging when she realized that the price of commodities, such as corn and soybeans, could fluctuate drastically. She said she purchased options to protect against the risk of an increase in the price of commodities.

Clinton County obituaries

Leo A. Bauer
Westphalia -- Funeral services were held Saturday, May 19, at the St. Joseph Catholic Church for Leo A. Bauer, 81, St. Johns. Mr. Bauer died May 14 at 9:15 a.m. at the St. Johns hospital.

Mr. Bauer was born Feb. 22, 1894, in the town of St. Joseph, to Mr. and Mrs. Fred Bauer. He married Miss Ethel Thompson of the town of Truman on April 16, 1915.

Mr. Bauer moved to St. Johns in 1918. He farmed in the town of St. Joseph until 1921 when he moved to St. Johns and worked in the cable and telephone business until his retirement in 1960.

He was a member of the St. Joseph's Catholic Church. Mr. Bauer was a member of the St. Johns Masonic Lodge No. 254, the American Legion Post No. 1, the V.F.W., the St. Johns American Legion Auxiliary and the Knights of Columbus.

Survivors are his widow, Mrs. Ethel Bauer of St. Johns; 3 sons, Robert M. Bauer of St. Johns, Charles A. Bauer of the town of St. Joseph and Fred W. Bauer of Portland; 4 daughters, Mrs. Phyllis Johnson of St. Johns, Mrs. Margaret Stone of the town of St. Joseph, Mrs. Dorothy Gerhard of the town of St. Joseph and Mrs. Estelle Pederson of Bend, Ore.; 16 grandchildren and 31 great-grandchildren.

Funeral services were held Saturday, May 19, at the St. Joseph Catholic Church for Leo A. Bauer, 81, St. Johns. Mr. Bauer died May 14 at 9:15 a.m. at the St. Johns hospital.

Asparagus sale success

The sale of Michigan asparagus at the Farm Bureau office on May 20 was a success — 255 pounds of asparagus sold for $120. A variety of other vegetables were on sale, including potatoes, carrots, and cucumbers. The proceeds will go towards the Farm Bureau efforts to support local farmers and their families.

Land use becomes more important

4-H Chatter

4-Hers to host Japanese youths,

By John Aylworth

Japanese host family in one,

two, three, four and five,

Come to view, to study, to learn,

4-H members will serve local,

Japanese tourism will grow,

At Metro Airport on July 31st,

The group is expected to arrive,

The cost of sending one delegate

is approved by the Japanese

change Foundation is a

necessary part of the exchange.

Big changes are likely in 1975

when 100 teams will come to

the US. It is important that

we continue to foster these

relationships, as indicated by

the Clinton County's project

in 1974. This year Clinton County

will send seven teams to

Japan. The exchange and hosted

seven teams in 1974.

In this exchange and hosted

seven teams in 1974.

For more information about

the Japanese tourist exchange,

please contact your local 4-H

leader.

Extension calendar

July 14: 4-H Fair begins.

July 20: 4-H Fair ends.

July 21: 4-H Fair continues.

July 25: 4-H Fair ends.

July 28: 4-H Fair ends.

Ovid-Elsie students compete in Special Olympics

Eighteen students from the Ovid-Elsie Area Special Olympics team took part in the 38th annual Summer Games in Traverse City last week. The Special Olympics provides an opportunity for athletes of all ages and abilities to develop social skills, self-confidence and athletic abilities in a non-competitive environment.

The event began with an opening ceremony that took place at the Michigan State Fairgrounds. After the athletes received their trophies, they were then sent out to participate in the various competition events.

This year's event included a variety of events such as swimming, track and field, and even an archery competition. The athletes were broken down into different age groups and skill levels to ensure fair competition.

Ovid-Elsie's athletes were accompanied by their parents and teachers. This year, the team included athletes from all over the three county area, including Cass City, Marlette, and Ovid-Elsie. The athletes competed in both individual and non-competitive events, allowing everyone to participate at their own level of ability.

The event concluded with a closing ceremony where the athletes were honored for their achievements. The winners were presented with their awards and certificates, and the athletes were given the opportunity to celebrate their success with family and friends.

Overall, the 38th annual Summer Games were a success. The athletes demonstrated their skills, teamwork, and dedication to the sport of Special Olympics. The event was a testament to the spirit of inclusion and the power of sports to bring people together, regardless of their abilities.

The Pewamo Fire Fighters were called to a fire at the New School on May 28, 1975. The fire was quickly put out. The next meeting will be June 13 with Mrs. Pauline Cook of Long Lake.

REGULAR CLINTON COUNTY ZONING COMMISSION MEETING

The Regular Meeting of the Clinton County Zoning Hearing Officers will be held on Thursday, June 4th at 7:30 p.m. at the Courthouse, St. Johns, Michigan. Any person desiring to be heard is invited to be present.

Young farmers plan picnic

All young people and their under one are invited to the July 3rd Picnic to be held from 11:00 a.m. to 5:00 p.m. at the St. Johns United Methodist Church. Entertainment will be provided throughout the day, and dancing and refreshments throughout the evening will be served.

What a difference a Blico Door makes!

Here's the way to add new beauty to your home. Replace that wooden hatchway with a modern, all steel Blico Door. It's ruggedly built, weather-tight, and so easy for everyone in the family to use. What's more, it will make your basement more secure against intrusion. And it will pay for itself many times over by saving repair and replacement costs.

If your home was built without the convenience of a direct basement entrance, ask us for Blico's new handbook "How to Add Valuable Living Space to Your Home."

KARBER BLOCK CO.
RADIO DISPATCHED SERVICE 812 CHURCH ST. ST. JOHNS PHONE 254-2627

This number will alert the utilities listed under the counties below. Find your county. Any utilities not listed must be contacted individually.

Homeowners, as well as contractors, should call MISS DIG 48 hours in advance of any digging, boring or blasting for the location of underground facilities of utilities. All calls will go to the MISS DIG Utility Communication Center where a representative of the MISS DIG system will ask for the location and approximate starting time and type of work to be done. This information then will be passed on to the above participants, who either will stake their facilities or will notify caller that no facilities are present. This location service is free.

If choosing the right tires for your car gives you as much anguish as the kid with a nickel in a candy store, then here are some basics to help you. With the profusion of design types and materials, confusion is understandable.

According to the Rubber Manufacturers Association (RMA) there are three different tire constructions prevalent today. **Bias Tires** may have two, four or more body plies of rayon, nylon polyester or other materials. Basic fibers cross at an angle of about 35 degrees with the center line of the tire strengthening both tread and sidewall. Alternate plies extend in opposite directions. In normal, light duty driving, bias tires should be sufficient.

**Belted Bias Tires** (Heavy Duty Tires) have a body similar to that of bias tires, plus two more belts under the tread. This construction strengthens the sidewall and gives greater stability to the tread. Tread life is lengthened since the belts reduce tread motion on the road. Glass belting is often used in belted bias tires helping resist flex and running cooler.

**Radial Tires** have body cords extending from bead to bead. Cords run at an angle of about 90 degrees "radial" to the tire circumferential center line. Two or more layers of relatively rigid belts are found under the tread. This construction gives greater strength to the tread area and flexibility of the sidewall. The belts restrict tread motion during contact with the road. Tread life, traction and gasoline mileage are improved with radial tires, particularly the steel belted variety.

If you are putting two new tires on your car, mount them on the rear wheels. This will provide better traction, handling and blowout protection. If you’re putting a single new tire on, pair it with the best remaining one on the rear axle.

Know how to tell when car's steering system needs attention?

When the red light or gauge on your dashboard warns of low oil pressure, there's generally time to do something about it. But when you get warnings of something amiss in your steering system, it could be a sign that potentially dangerous and expensive repair damage has already been done.

That's one reason it pays to have your favorite car service man check the front end at every opportunity. And that's why one should keep components in proper alignment, state.

BELTS HELP REDUCE CAR FATALITIES

Hospitals in Australia are reporting a drop of 24% in bed occupancy since the introduction of mandatory seat belt wearing legislation.

In Victoria the seat belt wearing law has been in two years, and they have experienced a 20.8% reduction in road deaths. In the rest of Australia the seat belt law is just one year old, and there has already been a 17.2% reduction in automobile deaths throughout the country. Serious injuries, they stated, have been reduced by about 50%.

THE INSIDE STORY

A device allowing mechanics to look inside an automobile engine without disassembling the engine has been developed by American Optical. This flexible fiber rod contains its own source of cold light and saves service personnel time and labor.

Of lubrication and adjustment.

To help you recognize the signs your car will give you when steering components are out of whack, below is a list of symptoms that can result from malfunctioning front end parts.

SYMPTOMS — hard steering, car pulling to one side, car wandering, uneven tire wear, front wheel shimmy, loose steering, heavy thumping on rough roads.

POSSIBLE CAUSES — worn or binding ball joints, front end out of alignment, loose front wheel bearings, loose or dry steering linkage.

CRITICAL STEERING COMPONENTS OFTEN ARE OVERLOOKED BY CAR OWNERS. ONCE TROUBLE IS SENSED IN THIS SYSTEM, THEN IT MAY BE TOO LATE TO AVOID EXPENSIVE REPAIRS. REGULAR LUBRICATION AND INSPECTION OF THE STEERING BY YOUR FAVORITE SERVICE MAN CAN PREVENT PROBLEMS BEFORE THEY START. (PHOTO COURTESY OF TRW)
Filters stand guard against engine wear

Ornate as the rituals at Buckingham Palace, Parliament Hill or the Tomb of the Unknowns, there is a guard changing ceremony that's important to a motor vehicle.

The automobile guards are the filters that protect a car's engine from potentially serious harm. The air, oil and gasoline filters help screen out foreign materials from vital engine parts.

The air filter prevents dirt from entering the carburetor where the air and fuel is mixed. When clogged, the filter can cause serious reduction in power and performance, and often a drastic loss of fuel economy.

Most cars today use disposable filters which should be replaced at 10,000 miles as part of an engine tune-up.

The oil filter catches foreign objects in the oil, keeping them from damaging engine parts. A clogged filter cannot perform its function efficiently. Especially in these times of the recommended shortened time of oil change, a new oil filter should be installed with every change of lubricants.

Complete Tourist Attractions
In places like London, Ottawa or Washington are the famous changing of the Guard ceremonies. Filters stand guard against engine wear.
Emblems, like locks of love’s hair, help keep affair with old cars warm

Many a romantic has snipped a lock of his true love’s hair as a memento. When a man has a lifelong affection for automobiles, he has to find another way to keep fond memories alive.

That’s why Harry Ginsburg, an auto parts store owner from Howell, Michigan, has amassed what may be the largest collection of auto emblems in private hands. Ginsburg has nearly 500 of these emblems dating from the turn of the century to some designed for vehicles not even on the road yet.

Birth of Ginsburg’s hobby had a rather macabre beginning. He said, “When I was a child in Kimbal, West Virginia, there was a dangerous mountain road that took its toll of many cars. Times were really hard and we kids used to salvage what we could from the wrecks. The little emblems caught my eye and I’d pop them off and put them in my pocket.”

Later when the Ginsburg family moved to Howell, his father Sol opened an auto junk yard. As cars were scrapped, young Harry would remove the emblems and store them in an old car trunk. Before he knew it he had collected a sizable number of the decorative symbols.

Worth hundreds, Mr. Ginsburg doesn’t know actually how valuable his collection is. He said, “I have one hood ornament from a Pierce that I’ve been offered several hundred dollars for. But I’m not interested in selling. My son, Scott, loves my collection almost as much as I do and it’s going to be a legacy to him.”

Although he owns classic emblems, he does not indulge in collecting classic cars. He beams, “I love to help friends restore classic cars. If people today realized that the cars they are driving could be valuable classics some day, they’d probably take better care of them.”

Mr. Ginsburg’s eye for posterity was demonstrated vividly when he heard the car his son purchased last year will be a discontinued model. “Let me take the emblem off it now?” father Ginsburg asked son Scott. Ginsburg is interested in adding to his collection. Anyone having an old car emblem can contact Harry Ginsburg, Advanced Auto Parts, 214 W. Grand River Avenue, Howell, Michigan 48843.

Plug the hole in your tank

A tune-up saves 1 to 2 gallons in every tankful.

Our tests have shown that, on the average, a car driven over ten thousand miles without a tune-up wastes 1 to 2 gallons in every tankful. It takes an untuned car 20% more to pass another vehicle at 50mph. And an untuned car spews more harmful pollutants into the air we breathe, and has twice as many “won’t starts”, as a tuned car. So please get a tune-up every ten thousand miles. And remember, no matter what kind of car you happen to drive — we’ve got your plug.
This 'cat' has only one life. It's the...

Catalytic converter in '75 models designed for light air pollution

There's one "cat" that doesn't have nine lives. This "cat" is the catalytic converter on 1975 model cars. Primarily a means of mandated pollution reduction, the catalytic converter is now making its way into the hearts of owners who want cleaner cars and greater fuel economy.

How would you like to save yourself nearly $100 a year on fuel costs if your car is one of those described by the U.S. Environmental Protection Agency (EPA) and other sources as being equipped with catalytic converters and driven in conditions where average speed is 23 miles per hour? If gasoline supplies are adequate, such savings are possible.

Electronic automobiles tout the benefits of the catalytic converter. They say your car travels 1,500 miles a year and is capable of getting 12 miles per gallon. If you are paying over $2 a gallon, these rules may help you get out of sinking costs.

If you are making major changes to your car, you might consider the following:

- The job of the catalytic converter is to change the "dragon's breath" of NO and NO, substances that cause smog and water vapor. In order to achieve this, the catalytic converter must be designed to function for a multitude of different, sometimes extreme, driving conditions. Designed to function for categories of Shock, oil, & auto.

- In the case of vehicles that run on unleaded fuel, converters can be adaptable for unleaded gasoline. However, emissions escape the muffler, particularly in areas where U.S. cars frequently travel, if there is no fuel available, then...

- The catalytic converter in '75 models is capable of getting 15 miles a gallon if fuel, since the heat of the catalytic converter can tolerate an occasional usage of leaded fuel, not for the leaded fuel, not for the leaded.

- The converter's job is to change the "dragon's breath" of NO and NO, substances that cause smog and water vapor. In order to achieve this, the catalytic converter must avoid leaded gasoline. Designed to function for a multitude of different, sometimes extreme, driving conditions. Designed to function for categories of Shock, oil, & auto.

We see warning signals every day of our lives, whether at work, at home or on the road. How many do YOU take heed to?

To be a safe driver you must take heed to warnings when you are faced with them. If you don't your family might be having supper alone tonight because you won't be able to make it. You might just have an accident and have to spend the evening elsewhere.

A BOOK REVIEW

Guide tells how to save on gas through car care, good driving

Dean of automotive editors puts it all in informative book

“Save Money, Save Gas” by Robert W. Irvin, Enterprise Publications, New York — Other than to stop eating, there is practically no way to save money readily than to cut down on gasoline consumption. If you are typical, you may not be able to reduce the amount of driving you do. But Bob Irvin, the dean of automotive editors, has written a definitive guide to help you make that driving cost a whole lot less.

Irvin writes,“One thing is true for every car — you can improve fuel economy by better maintenance and car care.” And he proves it.

Tune-up benefits

Defining a tune-up as checking the carburetor, the engine compression, oiling or replenishing the air cleaner elements, gapping or replacing the spark plugs or distributor points, Irvin explains the benefits. The author quotes the U.S. Environmental Agency which says, “Keeping an automobile tuned up can, on the average, improve fuel economy 4 percent as compared to an untuned automobile. However, an individual vehicle which is greatly maladjusted or undermaintained — for example, spark plugs misfiring, air filters clogged, carburetor improperly adjusted — can suffer significantly worse fuel economy penalties of 20 percent or more.”

Fused into the last 50 pages of the book are numerous gas-saving tips that have eluded many writers of the subject. Irvin points out that Les Viland, an economist, runs a seminar in which he teaches what he calls the “cornerstone of the modern American economy,” the need to cut back on gasoline consumption. Among the practical suggestions are: Defective air cleaner elements can rob a car of 7 to 13 percent of its fuel economy.

Irvin explains the benefits. Irvin warns against fuel economy gadgets now on the market. A leading consumers organization has tested a number of these “miracle” devices and “has yet to find one that is beneficial.”

One auto company did find a carburetor that helped realize a 68 percent fuel savings. However, the carburetor would have cost $2,560 to produce. “Save Money, Save Gas” by Robert W. Irvin can be ordered to get gas economy with tractors and recreational vehicles, the effects of tires and other equipment on mileage and the pollution controls bear on gas savings.

Save Money

Weaving waste

Also cited is an automobile manufacturer’s recent study showing that motorists who choose and use radial-type tires, or special streets can waste up to 43 percent of the gasoline they use.

The book also contains valuable information on what gasoline economy you should expect from your car, how to get gas economy with tractors and recreational vehicles, the effects of tires and other equipment on mileage and the pollution controls bear on gas savings.

Exhibiting car focuses attention on need for service

Late last summer, a young Port Huron, Michigan, woman hit it lucky twice. Her first bit of fortune was finding a buyer for the 1966 model care she was selling. Her second stroke of luck was being alive.

An official of the Car Care Council (CCC) happened to be looking for a car just like the one Susie Smith (not her real name) was driving. The CCC was seeking out a vehicle currently being driven, yet in such poor condition that it was a menace to the driver and other people on the road.

After purchasing the "accident going someplace to happen," the Council dubbed the vehicle "Calamity Jane," and used it to inaugurate a nationwide motorists education program.

Among the dangerous conditions plaguing the car were defective brakes, bald tires, misaligned wheels, bad shocks, faulty steering — any one of which could have helped cause a fatal accident.

The car's exhaust system was rotted away, a condition made even more hazardous by the fact that body and undercarriage rust provided a tailor-made conduit for lethal carbon monoxide fumes.

The water pump was loose and leaking, headlights misaligned and the ignition system so badly neglected that starting the car was a major task.

A CCC spokesman remarked, "Jane was emitting so much pollution that the analyzing device couldn't even record the amount. Emissions knocked the needle clear off the dial."

The Council used Calamity Jane, with roof painted a luminous red for DANGER, as a centerpiece for Car Care Week in Port Huron. The car was towed (not driven) to various locations to show students and other groups how neglected a car can be, and still be allowed on the highway.

"Jane" also was the center of attention in an Emissions Check Lane program sponsored by the local Jaycees.

CCC reports that the week helped build interest in car care in the Michigan community. It also accomplished another aim. One local observer put it this way, "It makes me shudder to think that a car like that was operating on our streets only a few months ago. And I bet there are a lot more like that one. When the (bleep) are we going to get compulsory vehicle inspection in this state?"

Michigan is one of 19 states that does not have a compulsory inspection law.

"Calamity Jane" was taken out to Port Huron High School to give driver training students an understanding of the importance of good car maintenance.

MAKE SURE YOUR CAR IS VACATION READY!

There's nothing finer than seeing this country of ours. It's a beautiful way to vacation. But, don't take chances on having a bad time because of car trouble. Take your car to any of these below listed local service stations and have it made "Vacation Ready". A thorough check of your car's battery, brakes, tires, lights, etc. could save you costly repairs on the road. Call for an appointment to have your car serviced today!

Antifreeze is a misnomer...

Shields engine from heat as well as cold

If you feel installing new antifreeze in the spring is like celebrating Christmas in July, then the new facts of motoring life haven't been made clear to you. When last winter's short supplies of antifreeze hit the car-owning public, a number of car owners either did without a fresh change or paid premium prices.

What these motorists may not have realized is there is no urgency to change antifreeze in late fall or early winter. It makes sense to change it any time a change is needed — in July as well as January.

Actually, car experts say, antifreeze is a misnomer. Coolant antifreeze is a more accurate description of the product. It is designed to both protect against the rigors of sub-zero weather and the plus 250°F operation of a modern, high compression engine in summer.

So installing a fresh cooling system protection may be smarter at times when the car's air conditioning is going full blast and warm air temperatures are making engines run hotter.

Most cars are purchased new in warm weather months. Therefore, if one heeds recommendations of annual changes of coolant, the change should come in these same warm weather time periods.

Historic patterns of late fall antifreeze changes date back to times when alcohol or methanol were used as bases of the product. These boiled away when warm weather came so it was important to put in new supplies when weather got cold again. Today's coolant base is ethylene glycol that can withstand both cold and hot temperatures.

Installing new coolant antifreeze at this time of year may save you money and long waits for the product next fall when most motorists start to worry about the need for change.

SHINING EXAMPLES
A survey in Great Britain reveals that among those who polish their cars regularly, 58 per cent have never had an accident. Only 31 per cent of those who don't polish cars could claim such distinction.

BREAK IN TIRES
Tires need a break-in period when new. Keep well within the speed limit to help tires "adjust" to other tires on the car so they can function as an integral unit.

CLEANER AIR
New Jersey's mandatory emissions inspection program is expected to reduce carbon monoxide emissions by more than 20 per cent in its first year of operation.

PACKAGES AVAILABLE

PACKAGE A — SAVE $79* when you buy this Explorer option including: Your choice of three exclusive Explorer colors—Coronado Gold, Mexican Red and Hot Ginger Metallic • Special Interior Trim • Exterior hood ornament • Front bumper guards with rubber strips • Mag-style wheel covers (150) • Conventional wheel covers for others • Front 16.5-in. wheels • Bright box rails (8-ft. Styleside) • Bright low-mount, Swing-Lok mirrors • Bright windshield and drip moldings • Bright exhaust pipe extension • Explorer nameplate.

PACKAGE B — SAVE $132* when you buy this Explorer option. Includes everything in Package A plus power steering and SelectShift Cruise-O-Matic transmission.

PACKAGE C — SAVE $197* when you purchase this option. Package includes everything in Package B plus air conditioning.
Increasing automobile efficiency will be big help

"The American economy now consumes about 17 million barrels of oil each day. Our inability to meet this demand from domestic suppliers has forced us into increasing dependence on the oil-rich Middle East and other foreign suppliers." So says a statement from the U.S. Department of Transportation, special-ly prepared for this supplement to present the government’s point of view on the gasoline crunch. The statement continues. Transportation accounts for nearly 60 per cent of all the liquid fuel consumed in the United States and the more than 102 million-miles-of-highway traveled throughout the nation by each of the nearly half of transportation’s total use.

Fights inflation

Obtaining the fuel efficiency of our cars will go a long way toward decreasing our demand for petroleum and easing the inflationary pressure created by that demand.

President Ford has established the goal of increasing the fuel efficiency of the 1980 model cars by 40 per cent over 1974 models. Our research indicates that the President’s goal is entirely reasonable and can be reached by the manufacturers through improved technology, engine resizing and a relatively limited marketing shift to smaller cars. Indeed, the average fuel economy of 1975 model automobiles has already brought about a 13.5 per cent improvement over 1974 models — a major step toward the President’s goal.

Need action now

President Ford has emphasized the urgency of whiplash inflation now. To bank on the long range solutions of increasing domestic energy supplies and improving automobile fuel efficiency is like praying for rain while flames lick through the roof of the house.

President Ford struck at the heart of the matter when delivering his address on the economy last October by asking all of us to reduce our driving by 5 per cent in the effort to both curb inflation and to ease the energy demand.

Actually, the President’s request was a modertone. One study indicates the average car owner could reduce his driving by 10 per cent without seriously affecting his job or living standard.

Save 10 billion

If that average car owner, now driving 13,000 miles a year, would cut his driving by 10 per cent he would save some 100 gallons of fuel annually. And, if the 100 million-plus cars on the road each achieved similar reductions, the savings would exceed 10 billion gallons of gasoline a year with the very significant savings in fuel cost of $5 billion.

The plain truth is that most of us too casually and too wastefully use our automobiles at needless cost to our economy, to the disadvantage of our society. Many trips are made for purposes of dubious value. And, the number of workingman trips could be greatly reduced by carefully organizing our daily routines.

Double up, save

Although the typical car seats four persons, the urban work trip occupancy averages only 1.4 persons. This statistic tops all others in supporting the charge of waste and inefficiency in the national transportation system. Raising the occupancy rate nationwide to an average of two persons per automobile would save an extraordinary five billion gallons of gasoline a year.

We at the Department of Transportation have placed top priority on encouraging greater nationwide participation in carpooling. Our theme: "Double Up America — Two Can Ride Cheaper Than One." The reduction in the use of fuel that a concerted national carpooling effort could bring about would significantly ease a major inflationary pressure on the economy. Additional goals that carpooling can help achieve are reduction of urban air pollution and an easing of traffic congestion on the streets and highways in and around our cities.

Autoparts

Let us be your complete SPRING

engine tune-up

front-end alignment

painting

auto repair

fast service

work guaranteed

Reeves Wheel Alignment 917-772-2640 St. Johns, Mich.
Time For A New One?

THE "75s" ARE GREAT

It's your choice....

when it's time for a new car
you have your choice at
several St. Johns dealerships

...AND WHEN IT COMES TO
FINANCING YOUR CAR...

It's YOUR Choice Too!

ASK YOUR DEALER TO
FINANCE YOUR NEW CAR
AT CENTRAL NATIONAL BANK

It does make a difference
SAME FAST SERVICE FOR
USED CARS, TOO!
